

**DESCRIPTION:**

**Fleet-200** is the second step in a two-step cleaning system designed to be used with the Wechem two-step, cold water, high-pressure washer. This system was designed to clean heavy-duty equipment and over-the-road trucking equipment, such as truck trailers. When used as directed, this system is the most efficient cleaning system available today. It will remove heavy soils (including carbon stack stains) from diesel exhaust and it tackles the hard to remove magnetic road film on painted surfaces. In addition, **Fleet-200** can be used through pressure cleaning equipment for general cleaning and degreasing of many types of equipment, trucks, cars, buses, etc. **Fleet-200** is safe for use on glass, plastic and polished or anodized aluminum surfaces.

**DIRECTIONS:**

Place the #2 hose directly into container. The pressure cleaning system will automatically dilute concentrate to the proper cleaning strength. Apply **Fleet-200** onto a vehicle surface directly on top of surface saturated with **Fleet-100**. After covering surface with **Fleet-200**, switch machine to rinse position and rinse detergent and grime off of the surface. Always rinse thoroughly from the top down. Never allow this chemical to dry on the surface.

**Fleet-200** may be used as a one step cleaner for surfaces that contain glass and polished or anodized aluminum surfaces.
